WORK EXPERIENCE

SOFTWARE ENGINEER

Aug 2025 – Feb 2026

Gumroad, Remote

- **Improved dashboard navigation performance by 5×** by leveraging deferred props during migration from Ruby on Rails to Inertia.js; enabled progressive rendering by prioritizing critical data and asynchronously loading heavy sections.
- **Reduced computational overhead by 150×** by replacing linear file lookups with a memoized map, eliminated large-scale content rendering freezes.
- **Reduced international payout failures and improved revenue reliability** by refining Stripe country handling, introduced graceful fallbacks for unsupported regions, preventing payout disruptions.
- **Resolved a high-impact race condition in file uploads that caused indefinite loading and blocked product saves;** fixed stale in-memory references for cancelled Amazon S3 uploads by enforcing consistent state cleanup, significantly improving reliability of creator workflows.
- **Collaborated with maintainers and senior engineers** to identify recurring issues, performed root cause analysis and implemented fixes, reducing customer-reported defects by 30%.

SOFTWARE ENGINEER INTERN

May 2024 – Aug 2024

WNE3, Remote

- **Built and deployed full-stack web applications on Microsoft Azure**, owning end-to-end development across frontend and backend; delivered scalable, production-ready features.
- **Designed and implemented secure authentication systems** (JWT, OAuth), strengthening application security and access control.
- **Streamlined early-stage user onboarding** by integrating external data pipelines (Google Sheets API), enabling faster feedback loops and product iteration.
- **Guided and mentored interns**, accelerating team productivity and improving code quality through structured support.

PROJECTS

Automated Stock Analyzer

- Built an automated stock analysis tool to identify high-potential stocks using technical indicators like **RSI, MACD, and moving averages (golden crossover)**.
- Designed data processing pipelines to filter and rank stocks based on predefined trading signals, reducing manual analysis effort.

AmpPay

- Built a real-time energy monitoring platform enabling users to track consumption and analyze usage patterns through live data streams.
- Implemented a billing prediction module using linear regression to forecast month-end energy consumption based on historical usage.
- Developed a smart metering pipeline to stream real-time sensor data to a PostgreSQL backend.

TECHNICAL SKILLS

- **LANGUAGES & FRAMEWORKS:** Python, JavaScript, C, React, Django
- **DATABASES & TOOLS:** PostgreSQL, MySQL, Docker, Git
- **CONCEPTS:** Data Structures & Algorithms, System Design, Performance Optimization

EDUCATION

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AND ENGINEERING | CGPA: 8.65 / 10

Aug 2023 – July 2027

Government Model Engineering College, Kochi, Kerala, India

ACHIEVEMENTS & CERTIFICATIONS

- **Top 15 Contributor**, Gumroad Open Source — Ranked among leading contributors with **25+ merged PRs**.
- Winner, MECLABS 2024 — **Ranked 1st among 100+ teams across Kerala**.
- Millennium Fellow — Selected for a global leadership program by **UN Academic Impact (UNAI) & MCN**.
- Solved **650+** DSA problems with a LeetCode **contest rating of 1500+**.
- Winner, BitWise Coding Competition — **Secured 1st place among 200+ participants**.
